PROJECT TITLE	University Admit Eligibility Predictor
MAXIMUM MARK	2 Marks

Problem Statement (PS):	The aim of this project is to help students in shortlisting universities with their profiles. The predicted output gives them a fair idea about their admission chances to a particular university. This analysis should also help students who are currently preparing or will be preparing to get a better idea.
I am (USER)	The goal of getting into a reputable institution and a career-oriented university is furthered by a user who has access to the entire collection of data for all universities based on his or her preparation for university entrance and eligibility requirements.
I'm trying to	attempt to set up the user so that they actively participate in choosing their career by selecting a suitable institution or university.
But	I doubt the user will be accepted to the university of choice.
Because	Of the low marks, it is uncertain if they will be admitted to the university.

Which makes me feel	Depressed and angry because they were denied admittance to their dream schools, they spent a lot of time and money, and they lacked knowledge.
